

1. Purpose of the High School Website — MUST Be Defined

If the website serves:

- Students
- Parents
- Teachers
- Staff
- Future applicants
- Community

Then the purpose becomes:

“To provide information, communication, and services to all school stakeholders.”

Without defining purpose:

- The website becomes confusing
- Pages become random
- Important features get missed

So yes — this is **strictly required** before coding.

2. Core Website Structure — Also Mandatory

Structure is like the building plan before constructing a house.

If you skip structure:

- Navigation becomes messy
- Users can't find information
- Future upgrades become difficult

Since it serves multiple user groups, your structure must reflect that.

Recommended Structured Model (For All Users)

Instead of random pages, organize by **user groups + information type**.

Public Information Pages

Accessible to everyone:

1. Home
2. About
3. Academics
4. Admissions
5. News & Events
6. Student Life
7. Staff
8. Contact

These are mandatory for a high school website.

Service-Oriented Sections (Future Ready)

Even if you exclude login now, structure should allow space for:

- Student Portal
- Teacher Portal
- Parent Portal

This is called **scalable architecture planning**.

Important Design Principle

Since the site serves everyone:

You must design around:

- Clear navigation
- User-friendly layout
- Information hierarchy
- Easy access to services
